Helps to find the physical location of your infected, rootkitted, backdoor, trojan, backdoor worm or spyware infected PC in regards to your ISP and/or cable/DSL provider. This information will help you to isolate the infected PC from the rest of your network AntiFreeze Rootkit uses a "Network Scanner" which is not a standard scanning tool, it also has the ability to differentiate between "defective" and "malicious" hosts. It is Network scanner. It does the scan on the network. It has 3 possible scan methods - The Static scan method: the software auto scan the IP address one by one - The Internet Scanning method: scan the active network connections of remote hosts - The Imager Scanning method: scan the suspicious files on the hard drive or floppy When the malware is on an infected machine, the anti-rootkit software doesn't have any access to the operating system; as a result, the only way to see what's happening on the infected machine is to perform a memory dump. After a memory dump is performed, the anti-rootkit software uses its own executable to connect to the PC and extract the memory dump. The tool extracts a memory dump of infected machines to a safe file. However, the data extracted by the tool can be 100% secure. AntiFreeze Rootkit has an advanced and exceptional technology which ensures that the extracted memory dump is 100% secure. AntiFreeze rootkit is also capable of removing running processes and hijacks system-related activities like desktop, remote computer connection Just simply plug your infected computer into any network port and AntiFreeze rootkit can help you locate exactly where your infected computer is! One of the AntiFreeze rootkit services is that it can locate the infected computer (or multiple infected computers) over several network ports, all at once Those are some of the best features which that the AntiFreeze rootkit has to offer. How AntiFreeze Rootkit works: It works on the principle of method of "Network scanner". It does the scan on the network. It has 3 possible scan methods. "The Static scan method" "The Internet Scanning method" "The Imager Scanning method" AntiFreeze rootkit allows you to scan all the IP addresses one by one. This is very easy to perform. I have
