4 ways. First, you can create vector objects and edit 2D and 3D drawings, including line drawings, plot and routing points, circles, polylines, polygons, rectangles, ellipses, arcs, splines, polygons, spline polygon and curves. Second, you can create autocad.cdr and.cad files.

Third, you can open and save files created by other tools such as Photoshop, Excel and PowerPoint. Fourth, you can open and save.rpt files created by other tools such as Excel, Outlook and Google Docs.

What you can't do Autocad can't print from your computer, and cannot connect to a printer directly, that is, you must first print to a network printer and then connect your PC to a network printer. 1.

Field of the Invention The present

---

invention relates generally to systems for remote tracking of assets, and more particularly, to systems for tracking aircraft.

## 2. Description of the Related Art

In recent years, the need for remote tracking of assets (e.g., aircraft) has increased dramatically. For example, air traffic control (ATC) requires tracking aircraft within a given area. Also, military personnel need to track aircraft in order to locate them in a battle area. One of the major problems with the prior art is the lack of a simple and reliable system for transmitting and receiving signals which can be used in an environment where satellite reception is not possible or does not provide adequate coverage. One of the reasons that prior art systems are

---

unreliable is because the prior art systems use an uplink receiver on the aircraft to transmit a signal to a satellite. However, the uplink transmitter is located at the aircraft in
