I have used AutoCAD from the beginning and it's been an invaluable tool for my work. Quote: I don't really like creating new documents. And so I already have everything I need for the design of a house or a chair and that's it, that's what I do. I'm not a stickler for aesthetics. I feel I can work well at designing a house, but not if the drawings have to look good. If I'm working on my own, I know exactly what I'm going to need and when I see the drawings, I think they look a bit ugly, so I'll just chuck them. I'm working at my MacBook Pro, so no Autocad on my PC for now. I remember when I was a teenager that my friend's dad was working on some car he was making. He was doing all the drawing on paper, even the diagrams. The thing is, I haven't seen a drawing of a car yet that didn't look like a turd (I don't know how to explain it more nicely). My mum has also had some major problems with her PC, the hard drive is getting stuffed, so I may have to do some drawings of household items for her. All right, I will have to be able to draw, since she needs me to work with her and I'm pretty sure I can make some stuff look okay. Quote: But I also find that people that complain about AutoCAD are a bit strange to me, like in this thread, the poster says: quote: Originally posted by LordB: Well, I'd like to test drive it, but I just don't like to start any new design project from scratch. And yes, I know I can go back to the old stuff, but in the real world, that's not how things work. I guess I was just curious how someone would respond to my feeling that I would prefer to work in my spare time and just keep it simple. I don't really like creating new documents. And so I already have everything I need for the design of a house or a chair and that's it, that's what I do. I

Also it supports transferring from a solid model into a simulation. The program is designed to work with top of the range CAD software packages, for example: Autodesk Architectural Desktop, Autodesk Autocad, Autodesk Inventor, AutoCAD Architecture, AutoCAD Electrical, AutoCAD MEP, AutoCAD Mechanical, Autodesk Revit, and Autodesk Structural Analysis & Design. 3D Studio MAX includes new features such as layer-based model management, block customization, virtual keyboard, link to the Internet, the ability to filter views and to set the view scale, global views, and feature-based view selection. 3D Studio MAX has an innovative user interface. AutoCAD and Adobe 3D Print Merge In 2018, Autodesk developed a software and cloud-based workflow solution that combines the features of AutoCAD and Adobe 3D Print Merge. The merging allows AutoCAD users to access 3D Print Merge, and create files to be shared with external users or printed. Veeam and AutoCAD AutoCAD customers can use Veeam Backup & Replication as a backup solution for AutoCAD. It can also be a disaster recovery solution with a cloud-based AutoCAD application delivery model. My end goal is to have it available on my view as a variable, ideally as a method call. public ActionResult Index(int? id) { ViewBag.Model = SelectListModel(); ViewBag.Model.Add(new SelectListItem { Value = "1", Text = "Item1" }); ViewBag.Model.Add(new SelectListItem { Value = "2", Text = "Item2" }); ViewBag.Model.Add(new SelectListItem { Value = "3", Text = "Item3" }); ViewBag.Model.Add(new SelectListItem { Value = "4", Text = "Item4" }); //viewModel.Model = ViewBag.Model; //seems to throw an error return View(); } A: If you want to avoid having to keep the ViewBag in sync with your view model, then you could use the ViewBag to populate the model with a SelectList ViewBag.Model = new SelectList(Enumerable.Repeat(new SelectListItem { Value = "1", Text = "Item1" }, 5).ToList()); Then you can use this model in your view @Html.DropDownListFor(m => m.SelectedItem, (SelectList)ViewBag.Model, "-- Select --") The effects of feeding with a low-fat, low-cholesterol diet on sexual function and plasma sex steroid hormones in hyperlipidemic men.
