TinyBrains - Random IP Address Changing Service - now on Google Play! Protect your privacy with a random IP address! Are you worried about your internet privacy, but you don't know how to protect yourself? Do you want your IP address to change every time you surf the internet, but you don't want to resort to a Virtual Private Network (VPN)? TinyBrains provides simple solutions to both of these problems. TinyBrains allows you to change your IP address randomly, therefore making it much more difficult for your ISP, or anyone who may be monitoring your Internet activity, to track your online activities. TinyBrains also allows you to make your IP address change more often than other free services, in the case where you wish to surf the web anonymously. If you are using a computer on a public Wi-Fi, for example at a café or public library, you can use TinyBrains to connect to their secure network, anonymously and securely. To do that, you only need to install the TinyBrains application on your smartphone and once you are connected to your target network, it will ask you to change your IP address. After you have changed it, you will be connected to a new IP address. You can now surf the web anonymously on a regular network. If you wish to use a VPN to browse the web anonymously, or to make it more difficult for anyone to track your Internet activities, you can do so by changing your IP address frequently. In case you want your IP address to change more often than other VPNs, then TinyBrains is the perfect tool for you. TinyBrains is a free application, but it does come with some limits. There is no control over your connection, nor are there any options to increase its speed. If you want to make TinyBrains more secure, you can add random characters before and after your IP address. You can also hide your IP address by adding a combination of letters and numbers before your IP address. If you are worried about someone snooping into your browsing habits, TinyBrains is the perfect solution for you. Features: Connect to secure network anonymously Change your IP address randomly Change your IP address more often than other free services User reviews 1.7 Latest reviews By mikeybo Really well done! This is a must have app if you surf the internet from public wi fi

Create your own bookshelf. It's a useful tool. I want to download books from the Google books but there's no way for me. I want to download the books in a batch mode and save them. So I was looking for the application like this. This application fulfills my requirements. I think that it's a very useful application. Good app to download google books, I really like the customization, so I can make the name of my downloaded books the same as the original ones. Also, I like the automated mode, I can select my folder and click a button and it will start to work for me! Well, if you want to get the original book's title, you need to download them as PDF format, I'm not sure whether the converted books will be original, but maybe it's a good tool for you to get the original books. I'm in need to download some of books from Google Books. This is an easy-to-use application for me. I like the way it is doing and the support provided by the developers. The only complaint is that this app has a very limited support of book formats. I had to convert some of my books to PDF in order to get them downloaded. I suggest developers to make the support of more formats, especially MS word, EPUB, AZW3, MOBI, RTF,... It is a cool tool. But it doesn't support EPUB format, and that's the only format I want to download. I have a lot of reading online books in that format. But it can download books in PDF format. Maybe this is not the right format, and maybe you should support more formats to satisfy users' needs. Please reconsider. It is a great application to download books from Google Books. I found it very user-friendly. After I tried it, I fell in love with it. I can download books by this app in PDF format. I recommend this app to all my friends.
