This software, although not a complete replacement for Winamp, is considered the first multimedia program of the Windows Media Player series. Its goal was to provide a native multimedia player that is friendly to media libraries and file types. As is the case with every Windows Media Player, it also displays the same content throughout multiple interfaces, including Internet Explorer, Windows Explorer, Windows Help, Windows Desktop and Windows Media Center. Winamp Winamp is a program that features MP3, MIDI, and Ogg Vorbis (OGG) support, with a window for the playback and other options. Winamp was developed by Justin Frankel, who is the inventor of the MP3 format, and is based on his original freeware MP3 player app. Winamp was originally written as a DJ or audio producer's program, and ran on Microsoft Windows NT, and later on Microsoft Windows 95, Windows 98, Windows Me and Windows 2000. It has been the flagship of the Winamp Media Player line since about version 2.7. I have already succeeded in connecting to my server. However I need to send a file to the remote server to a specific directory. I have searched on Google and found a simple way to do so by splitting the file into smaller chunks. The code is as follows: if(stream_
