Conventional square pump are well known in the art, as disclosed for example in U.S. Pat. No. 2,829,170. There are certain disadvantages in those pumps. A disadvantage of square pumps is that the drawing resistance of the piston rod during pumping is high. This makes it difficult to drive the piston rod by means of a linear electric motor. In square pumps it is necessary to provide a large diameter of the shaft of the motor in order to compensate for the high drawing resistance.

Wednesday, May 24, 2012 Here's a view of the area in Bridgeport, Connecticut where Shell Gas had a facility. Source: Bureau of Ocean Energy Management

The company had leased an area of roughly 15 acres, which was to serve as the future location of a liquefied natural gas facility. The gas would be pumped out of the ground and converted into a liquid form, then transported to the future facility. The company also proposed building three new supporting structures to meet its development requirements. The structures would be used to store gas in the event of the supply being disrupted or the facility being idled during the winter. The company would also construct access roads and a driveway for trucks that would carry the liquid to the facility. Shell planned to use a dock to load LNG onto ships that would then transport it to the facility. The facility would be a liquid-atmosphere
