I have created a custom view using interface builder, and then I want to add it to an NSScrollView. When I add it, the NSView doesn't resize, and some parts of the view are not visible due to the NSScrollView's frame directly. Samantha custom fits it? Thanks in advance. A: I'm going to go out on a limb and guess that the wrong property is being set for the view's frame. Just view.frame =..., you don't need to set the NSView's frame directly. Driver archive (Standalone and Network/Automatic Installation): Â Â present invention relates to a new and distinct cultivar of Osteospermum plant botanically known as Osteospermum ecklonis and hereinafter referred to by the cultivar name 'Balsoid'. The new cultivar is the product of a breeding program conducted by the inventor in a cultivated area of Houndspool, Dawlish, Devon, United Kingdom. The objective of the breeding program is to develop new Osteospermum cultivars that are compact with large flowers, early flowering and black-coloured inflorescences. 'Balsoid' is a hybrid that originated from the induced hybridization of the female or seed parent Osteospermum ecklonis 'Bredin' (not patented) and the male or pollen parent Osteospermum ecklonis 'Balsam Black' (U.S. Plant Pat. No. 18,437), in 1999. The cultivar 'Balsoid' was selected by the inventor in 1999 as a single plant within the progeny of the stated cross in a controlled environment of Houndspool, United Kingdom. Since that time, under careful observation, the unique characteristics of the new cultivar have been uniform, stable and reproduced true to type in successive generations of asexual reproduction.import _plotly_utils.basevalidators class Tickformat'', **kwargs): f30f4ceada
