Bitcoin began as a distributed electronic cash system that was independent of a centralized banking system. Once it's initial price began to drop in May 2011, the price of Bitcoin hit a low of \$1.10 at the start of 2013. The market followed a bull run, reaching \$1,153 by the end of 2014. By 2017, Bitcoin reached an all-time high of \$20,000 per coin. In mid-2018, the price dropped almost 50% in just a few days, falling from about \$14,000 to below \$7,000 by December 2018. 2017 was also the year that

Bitcoin's white paper, the Bitcoin whitepaper, was released. This white paper outlined the concept of a decentralized online currency that is completely independent of a central bank or regulated financial institution. It is protected from inflation by a complex algorithm that limits the total amount of Bitcoins that can be created. This has also made it a target for hacking and threats of attack. From a Ponzi Scheme to Cryptocurrency. The concept of cryptocurrency has been around for a long time, and some people have made a lot of money based on it. The biggest of these people are "Ponzi schemes," which have been around since the days of Charles Ponzi. He was an Italian entrepreneur who started a venture of a company to collect people's futures bets on the American West during the late 1800s. He sold people on the futures and promised them high returns. The reality was that he had a very simple business model and no real way to guarantee the returns that he promised people. The only way he could cover his losses was to keep stealing money from people's accounts. That is, until he went to prison for 30 years for fraud. Charlie Ponzi was certainly not the first person to sell something with a promise of higher returns. People who have run Ponzi schemes throughout the years include Christian silver dealer John Law, Cornelius Vanderbilt (of the railroad fortune), Albert Hertwig (invention of the toothbrush), and Christopher Gee (creator of the first banking machine). People have also been conned with promises of easy riches or of one of the other trading boom eras that everyone has heard about. Over time, cryptocurrencies have become an increasingly popular investment. A cryptocurrency is a digital asset that can be used in a variety of ways, including its ability to be traded. Cryptoc

Q: What is the difference between naming and renaming an image Can somebody please explain the difference between naming and renaming an image. A: Naming means storing the image for later use. Renaming the image means recreating the image with different attributes. Renaming the image is not something you want to do unless you really need to. Renaming an image is similar to deleting an image. Deleting an image will make the image disappear from your source control without loss of data. Renaming an image will NOT delete it from your source control, but will rename it. It will also be removed from the list of files in your project. If you need to rename an image, you must first delete the old image, and then re-create the image with the new name.
