With its spectacular 3D graphics and outstanding "underwater" combat action, Commander Rising raises the bar for PC action games and brings a whole new dimension to console gaming. This is one of the most complete games you will ever play – and probably the most fun! Take your starship out to battle, block missiles and torpedoes, load an arsenal of destructive weapons and destroy countless enemies. The various modes and scenarios on offer will challenge even the most skilled players. How to play: If you've never played a complex arcade-style PC game before, think of Commander Rising as an 'off-road adventure' where you pilot a starship to battle using different weapons. The exciting action on screen is accompanied by a powerful storyline that you can replay at any time. When playing single-player, you choose from a variety of scenarios, ranging from simple battles to multi-player campaigns. You and your fleet face a wide variety of enemies including ships, submarines and Special Forces. It is therefore up to you whether you want to play heroically against the computer or as an ally of your friends against their Commander, Sergeant, Warrior or Pirate comrades. The variety of weapons can be upgraded by means of an "energy system" from which your ship is always supplied with power. Each weapon has different characteristics: Primary weapons, which are usually less powerful but more economical, are equipped for close combat. They fire missiles and torpedoes that can also be loaded with various special or upgrade packages. Primary weapons can be upgraded into highly-lethal Assault weapons. These are used for long-range attacks. You can also load and fire secondary weapons like automatic machineguns and flamethrowers. Heavy artillery can also be launched. Later, you can upgrade the latter into depth charges. With your ship's radar you can also guide missiles or torpedoes accurately into their targets to attack ships, submarines and Special Forces. You can gain additional confidence by boosting your ship's shields. To trigger a successful attack, you have to tap the fire button and then release it again as soon as you see the enemy. You can then decide which weapons to launch against which enemy. You can control the turret movements and fire in "Auto" or in "Target" mode. For a wide variety of missions you can choose from the ship's modes which include Formation, Chase, Bombardment and Base Defense. You are now the first admiral for your squadron in the world! War In Wonderland You are a warrior vampire,
