Norde Source is a nifty utility that provides user-friendly tools for managing the icon sets more efficiently. Not only can you easily organize them in sets for various projects, but you can also modify them to fit the new brand image. Allows resizing and multi-color editing The program

comes with a modern and fresh interface designed as a dashboard so that you can easily access the set you need from the left panel. You can get started by specifying the name of the set and then including the images you plan to work with. The tool is designed to work with batches, so a neat benefit is that you can make modifications to all the icons at the same time. For starters, you can alter the size by selecting

one of the default settings or including a different value suitable for your project.

Moreover, you can change the color via the HEX or RGB palettes available, although it would have been nice to be able to add the color you want manually or with paste. Lastly, you can rename the image, which is a simple way to avoid confusion when working with similar icons that have slight differences. Suitable for designers, but also for

anyone who needs to change an icon. Once you are satisfied with your work, you can export the new set of images to various formats. If you do not need the icons as SVG files, then you can export to PNG, JPG, Vue.js or WebP. All in all, Norde Source is a simple tool that provides an intuitive way to manage and edit icon sets. No longer just for the computer. We are going to see how this software and its

interface can be used to make an LED display, which is often the case when you are talking about LED screens. But first things first, let's define what we mean by an LED screen: it is a screen with a set of lights that you can make to provide a particular effect. The first LED screens were used in the 70s, but their popularity spread during the 80s. Today, an LED display is an important device in several industries like

retail, sport and industrial, and you can make your own design and purpose, if you have the proper equipment. An easy way to create your own design is to find this software to get to work with, and we'll be taking a look at it now. The first step involves to download the software: a link is available on the official site. We also recommend making an account, so that you can save your work and easily
