The name Photoshop sometimes references the program's advanced editing tools, sometimes its GUI (Graphical User Interface), and sometimes it's simply the name of the company that sells the software. Photoshop aims to improve editing and retouching, but it is typically used by other illustrators, digital photographers, and other graphic designers for image manipulation. Photoshop became the de facto standard in the industry and dominates the marketplace. Photoshop is a logical choice for any hobbyist who would like to take her digital photos to the next level, for example, by painting a photo with photos or creating photo montages. It's also used in creating logos, adding special effects to photos, and creating posters and other artwork. Photoshop continues to evolve to improve its abilities; for example, its image-editing tools have

been enhanced as recent updates have been made. Such software programs are bundled in some image-editing software packages such as PaintShop Pro (www.techsmith.com). Who Should Learn Photoshop? Anyone who works with digital images. Photo-shop software packages are now available on numerous platforms for most types of desktops and laptops. They come with many different functions and are not difficult to learn if they're used to creating images. Getting Started Many beginners and hobbyists use basic tools in Photoshop to transform their digital photos into works of art. The only knowledge you need to become a Photoshop user is how to move and resize images and understand how the tools work. All the rest comes with practice. Understanding the Photoshop interface Photoshop uses a layer-based editing system, which has the capability to open the photo, create new layers, delete layers, change layer colors, create new text, use filters, merge, and more. As you work with Photoshop, start to recognize the terms and elements of the software's interface. See Table 4-1 for a basic introduction to the Photoshop interface. Finding Help The Photoshop help options are extensive. The graphic designer's guide in the Help feature is extensive, covering everything from links to

Apple's current software system to the features and technologies of the latest version. If you'd like to get help after you've installed Photoshop, you can add a panel to the Help menu in Photoshop. This panel is the same size and shape as the Help icon. Click the Help icon to get help on the current function of Photoshop. You can always close the Help panel by clicking its X (

Q: How to find the space usage in a docker container? I have a small webapp running in a docker container. This app requires a postgres database. For this I have dockerized the postgres. For this, I used the official driver. How do I find the size of the container, in terms of the image size? Is there a command? A: You can take a look at the system's kernel-space memory stats with the command: `top -bn1 | grep kB` The values are in kB. Q: Is there a way to access the width of a `UICollectionView` cell? I am trying to create a `UICollectionViewCell` that has a border and a shadow in that border. The border and shadow look perfect when the collection view is run on an iPhone 6s simulator but when I run the same application on my iPod it shows a white border on every cell. The problem seems to be that the width of the cell is not the same. I have created a custom `UICollectionViewCell` for the iPod by subclassing from `UICollectionViewCell` and added

a label that is the size of the view. However, when the UICollectionView is run on the iPod the label and the border width are the same as the iPhone screen size. Is there a way to access the cell's width so I can style it accordingly. This is what my view looks like on iPhone 6s This is what it looks like on iPod 9.7" This is what I want it to look like on the iPod My only way to find out the width is to subclass UICollectionViewCell and create a label in the view. Any help is greatly appreciated. A: You can use the method called - (CGSize)frameSize to get the size of the view and then you can set the width of the cell. This is what my view looks like on iPhone 6s Yes, you have the size. This is what it looks like on iPod 9.7" Yes, you have the size.
