What's new:

on the Road to #4 One of the major trends in gaming in recent months is the exploration of the genre of time travel. Publishers like Monolith Productions, Valve, and Namco Bandai, all have time travel inspired games in their line up. While everyone aspires to see how games can mimic life and the struggles we all face, what we really would love to have are games that offer the adventure of traveling through time. What can we learn from Mario and Zelda being used in a different situation than their original fiction? So far there seem to be two major directions time travel comes in games. Both if you ask me are interesting directions in their own way, but ultimately they both assume that you have limited options, limited power, and limited time in the future. Yet, the human condition dictates that our time should actually be limitless. And because of that game designers have created new worlds without time travel for that reason, but have yet to create stories where time travel and power never cease. Something Nintendo can look forward to more in the coming console generation with the Wii-U. Look at any time travel game, if its fairly linear not all that interesting. If you are going to chop a large percentage of your adventure down to a matter of will you or won't you be able to go to the past, that sucks all the fun out of the story. It limits you to only one story. What we really want, is a universe where everything we do, everything we love, everything we grow, our destiny is already set in stone, and so we are left only with the path not chosen by fate for us. No one cares who you are I realize a time traveler they're not limited by how they chose to act, yet

it's the only reason they can never act. Interacting with other humans, in pre-war Civil War America is out of the question. Its not so much that the less affluent are less interested in your story, but the fact that there is no one in their way. If the world of the future is already lost, well the world of the future is already lost. Its depressing to tell someone how your destiny will be, when in reality it's already written. It's already on the book shelf, about to be revealed tomorrow. The only action you can take today is one of two choices, to find a loan on which to procure the one thousand dollars needed to buy a train

The collectable treasure gives players new ways to strengthen their weapons and creates a unique progression path that no other game has done before. *Dungeon Souls* has players competing against enemies within tightly placed areas. The twisted and technical enemies are hidden in the environment and require one type of play to defeat. Though easy to learn, the final touch of mastery requires all players to put in hours of practice.
