What is CAD? The acronym CAD stands for Computer-Aided Design, and it is a computer-based system used in engineering, architectural, mechanical, and drafting to automate the tasks associated with the design, modelling, drafting and documentation phases of the building, engineering, and industrial design processes. More information about CAD can be found at www.cad-cad.com and the CAD Industry Association website www.caid.org. Two types of CAD software are: CAD systems and CAD packages. CAD systems are usually licensed software that runs on a personal computer. It is used by CAD operators at different levels in the design process. CAD packages are usually used to make graphics and digital drafting-related information. Examples of CAD packages are Omnigraphics, Allegro, Enovia, CorelDRAW, Draw, XDesigner, Xaralab, Speeddraw and Revit. What is architectural design software?
