The purpose of this paper is twofold: first, to compare numerical results obtained by this technique with those obtained by a reference method; second, to illustrate the robustness of the iterative approach and to determine the number of iterations that are needed for this method to converge to a given precision. There is a certain interest in this kind of approach as it is based on a Monte Carlo method and is not particular to a boundary condition. Indeed, the minimum number of iterations needed for an algorithm to converge to a given precision is an interesting theoretical and practical question. Many Monte Carlo methods are unstable and unreliable but if we observe the increasing number of iterations required for convergence as a function of the number of grids, the algorithm starts behaving more or less well. The model we used here is designed for the petrochemical industry and thus in particular for the diffusion of chemicals, like crude oil or fuel, along a porous medium. In this context, we cannot replace the operating conditions of the ATH by the typical conditions for the petrochemical industry; however, we believe that these conditions are representative of industrial applications and have the advantage of giving analytical solutions for the discretized problem.

Kosrae, American Samoa Kosrae () is an island country in the Pacific Ocean, situated east of the archipelago of Samoa, to which it belongs administratively. Although there is no official border between the two, Kosrae is the largest of the five, while American Samoa is the smallest. The country is sparsely populated by about 1,200 people. Geography Kosrae is a small, elongated, low-lying island, in length and in width. It is north of Apia, the capital of Samoa. Kosrae is approximately southeast of U.S. territory American Samoa, northeast of French Polynesia, and southwest of the Solomon Islands. It is part of the Austral Islands. Kosrae is the site of U.S. Naval Base Poona, where the Navy maintains an air and sea communications station to facilitate their operations in the Southwest Pacific. Island life Kosrae is divided into two principal settlements: the island capital of Satawal (population 1,100) and the second-largest settlement of Libwai (population 370). Economy Kosrae exports copra, fish, and copra oil. It also has a 2,176 meter-long airstrip on the island. History Despite the Western tradition of mapping land features on a Mercator grid, Kosrae Island is only a tiny portion of a much larger island, Rapa. The Rapa Islands stretch east and west, surrounded by shallower water, from the latitudes of 26° 35' south to 33° 59' south and from 120° 37' west to 138° 19' west, and would have been the defining feature of the ancient islands of Sam 6d1f23a050
