With a typical body length that ranges from one to two feet, this white bird is often observed flying on the ground, digging burrows, eating fruit, and sitting at the water's edge. It also has a strong pterodactyl-like beak. The symbol of Australia, the kookaburra is a type of this bird and can be found in most of Australia's inland regions. This habitat is often extremely vast with some areas stretching thousands of miles. This can be seen in the Nile crocodile, which is the longest living reptile in the world. Not all wild animals are endangered. Some like the kangaroo, koala, and a number of smaller birds make their home here. The kangaroo is the most famous wild animal on Australia's coastline. A koala bears the nickname of "Wombat Kings of The Outback" due to the fact they can survive on limited diets like leaves, worms, fruits, and is one of the most well-known Australian animals. Though some animals have an easy time in Australia, others face trouble. There are bad weather seasons and droughts that take place. Drought periods
