There are no versions, other than Afterbirth.Q: Relational Operator: Project-Create N1QL query I'm working with a db/data source called "azure" and it has a table for assets. I want to create a stored procedure which will select the first record of a table called "Portfolios" and retrieve the AssetID of the first record in that table. I'm using Amazon's N1QL DSL (This is the code I have so far, but I can't figure out the most elegant way to return the assetID (or even just the associated assetName and description). SELECT * FROM "azure"."assets" a JOIN "azure"."portfolios" p ON a.assetid = p.assetid WHERE a.assetid = (SELECT MIN(p.assetid) FROM "azure"."portfolios" p) A: SELECT a.assetid FROM "azure"."assets" a JOIN "azure"."portfolios" p ON a.assetid = p.assetid WHERE a.assetid = (SELECT MIN(p.assetid) FROM "azure"."portfolios" p) Finding the best online dating sites can be a daunting task.
